When inserting and using strips in an eActivity, Strip Help can be a useful addition.

The example at right shows a NumSolve strip in the bottom window.

The top window contains the Strip Help, typically some hints on what to do in the lower window.

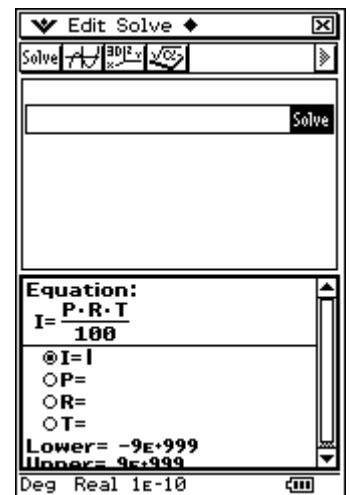

Now to re-create the above NumSolve Strip with Strip Help:

Start a new eActivity using **File, New**.

Tap **Insert, Strip, Numsolve**.

Enter the simple interest formula.

Tap into the Solve Strip in the top window.

Tap **Insert, Add Strip Help**.

The Strip Help window is created in the top half of the screen.

Tap .

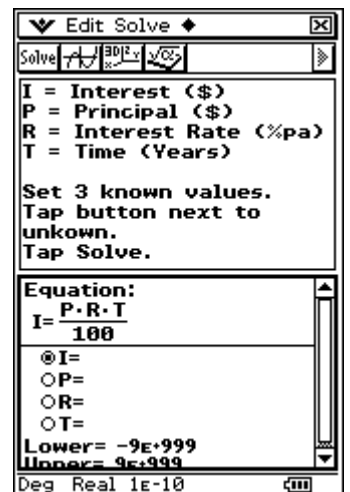

Enter suitable text using the **abc** Tab.

One complete, close the Keyboard, Strip Help and the Solve Strip.

Re-open the Solve Strip by tapping on .

Both the Solve Strip and Help Strip open simultaneously.

To remove Strip Help from a strip, tap into the strip.

Tap **Insert, Remove Strip Help**.
